

Index Seminum 2018

Hortus Botanicus Amsterdam (AMD), Netherlands

The first page of the first plant catalogue published by the Hortus in 1646, eight years after the garden was founded. The first index seminum of Hortus Botanicus Amsterdam was published in 1804 by Gerard Vrolik.

Index Seminum 2018

[Hortus Botanicus Amsterdam \(AMD\)](#) Netherlands

Each order is limited to 25 numbers
Orders can be placed until April 1, 2018

We prefer orders to be posted online (see e-mail). Desiderata, signed and sent by post and received before April 1, will also be accepted. See page 31.

The seed list consists of two parts:

Wild collected pp. 3 to 12. Seeds collected in the wild from several locations in the Netherlands. See each record for details.

Garden collected pp. 13 to 29. Seeds collected from open-pollinated plants cultivated in the garden (incl. conservatories). When known, the origin of the mother plant is given.

All seeds were collected in 2017.

Classification is based on APG IV and the complementing publications in [Phytotaxa 19 \(2011\)](#). Scientific names of indigenous species follow Heukels Flora van Nederland (van der Meijden, 2005). Additionally, [The Plant List](#) is used for species not listed in [Kew's WCSP](#).

Have a great botanical season!

The Index Seminum team:
Chantal Posthouwer (curator)
Jos van der Hoek (seed manager)

Desiderata 2018				
Enter catalogue numbers below (max 25)				

Please consider submitting your desiderata online. If you choose to proceed the traditional way, make sure you have signed the agreement below and that this form will reach our office before April 1, 2018. We can only dispatch seeds when these requirements are met.

Agreement on the supply of living plant material for non-commercial purposes leaving the IPEN

Against the background of the provisions and decisions of the Convention on Biological Diversity (CBD) and in particular those on access to genetic resources and benefit-sharing, the Hortus Botanicus Amsterdam is dedicated to promoting the conservation, sustainable use, and research on biological diversity. The garden, therefore, expects its partners in acquiring, maintaining and transferring plant material to always act in accordance with the CBD.

The responsibility for the legal handling of living plant material passes on to the recipient of the material. The requested plant material will be supplied on the following conditions, as drafted by the [International Plant Exchange Network](#) (IPEN):

1. The plant material is supplied only for non-commercial use such as science, conservation, and educational purposes. Should the recipient at a later date intend a commercial use or a transfer for commercial use, the country of origin's prior informed consent (PIC) must be obtained in writing before the material is used or transferred. The recipient is responsible for ensuring an equitable sharing of benefits.
2. On receiving the plant material, the recipient endeavours to document the received plant material, its origin (country of origin, first receiving garden, 'donor' of the plant material, year of collection) as well as the acquisition and transfer conditions in a comprehensible manner
3. In the event that scientific publications are produced on the supplied plant material, the recipient is obliged to indicate the origin of the material (the supplying garden and the country of origin) and to send these publications to the garden and to the country of origin without request.
4. On request, the garden will forward relevant information on the transfer of the plant material to the body charged with implementing the CBD (ideally, the national focal point in the garden's home country).
5. The recipient may transfer the received plant material to third parties only under these terms and conditions and must document the transfer in a suitable manner

I accept these conditions
